

Fruit Eating

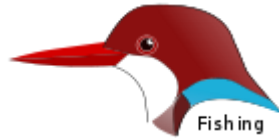

Beak Adaptations

Presented at the Auburn Public Library by *Hands on Nature™*

What do birds use their beaks for? Why do different birds have different beaks?

Netting

Fishing

Filter feeding

Probing

Granivore

This program educates children about the many different kinds of bird beaks and how birds use them.

Which ones make it easier to pick up food? Build a nest? Go fishing?

Stories and the interactive educational component will be followed by a fun activity whereby children will use different kinds of 'tools (straws, tweezers, etc.) to see which kinds of food are easy to pick up and which ones are not!

A craft will also be included after the activity, for children who want to make a bird beak mask.

When

Friday September 22nd
4:00pm – 5:00pm

Registration Required | Ages 4 - 10

Register online or
